

Use Case Name: AI-Powered HR Onboarding Document Assistant (MVP Build)

Description

An AI assistant that reads onboarding documents like an HR specialist, extracts essential information and identifies missing compliance details within seconds. It generates a structured onboarding summary including key HR terms, required access and equipment, missing elements and a draft welcome message using a friendly professional tone.

Target Users

HR Partner / HR Business Partner (primary)

Hiring Manager (secondary)

IT Support (for equipment/access setup)

HRIS Administrator (for SuccessFactors back-end integration)

These users will interact with task outputs and follow recommended actions.

Problem We Are Solving

- HR teams spend 30 to 60 minutes manually reviewing onboarding documents per employee.
- Key contract terms such as start date, probation period and notice period are often overlooked.
- Missing compliance items (such as signed NDA, data protection acknowledgement or valid ID) can delay onboarding or expose the company to risk.
- Onboarding summaries are inconsistent and rely heavily on individual HR knowledge.
- Current SuccessFactors and HR tools do not extract document insights or automate early onboarding planning.

Success Criteria (measurable targets for the hackathon)

- Reduce document review time per employee from **45 minutes to <1 minute**
- Correctly extract **at least 5 key HR terms with ≥80% accuracy**
- Flag all major compliance gaps in **≥90% of test scenarios**
- Generate consistent structured onboarding output every time
- Maintain scope discipline by declining non-onboarding requests

System We Are Building (MVP Scope)

We are building an AI-powered onboarding assistant that:

1. Allows HR to upload one or more onboarding documents (e.g. contract, CV, ID copy, policy acknowledgement).
2. Automatically extracts key HR terms such as role, start date, probation, notice period and work location.
3. Identifies missing or unclear compliance elements, marking them clearly as *“Not specified in document”*.
4. Generates a structured onboarding summary using a predefined format:

EMPLOYMENT SUMMARY
ACCESS & EQUIPMENT REQUIRED
MISSING / UNCLEAR (COMPLIANCE)
WELCOME MESSAGE DRAFT
RECOMMENDED HR ACTIONS
TAGS

5. Provides basic role-based access and equipment recommendations.
6. Drafts a first version welcome message in a friendly professional tone.
7. Ensures requests outside onboarding are declined to maintain scope and accuracy.

Agent Structure

Agent Responsibilities

Document Reader Agent: Extracts key terms and formats them

Compliance Review Agent: Flags missing or unclear compliance terms

Action Suggestion Agent: Generates recommended HR actions and access needs

Communication Agent: Builds welcome message using defined HR tone

Data Inputs & Outputs

Input Sources

- Uploaded files (PDF, Word)
- Role information (job description or text)
- Location/country (if provided)

Output Format

Structured onboarding summary (text JSON-like format + optional PDF)

Risk and Mitigation

Risk

Incorrect extraction
Missing document
Updated contract uploaded late
API/tool failure
Fallback:
Incorrect task delegation

Mitigation

Highlight low-confidence items for HR approval
Ask user to upload necessary file
Recalculate actions and readiness
“Manual review required”
Add manual override option for HR

Future Roadmap

Phase 1 (Hackathon MVP) – Document upload, term extraction, compliance flagging, summary generation

Phase 2 – Document update tracking, task delegation, readiness score

Phase 3 – Integration with IT ServiceNow & SuccessFactors onboarding flows

Phase 4 – Predictive analytics & 90-day plan generator

AI-Powered HR Onboarding Document Assistant – Extended Version (Phase 2)

Description

An advanced AI assistant that not only reads and analyses onboarding documents, but also updates onboarding cases dynamically, scores readiness, generates tasks across HR, IT and management, adapts to regional compliance rules and enables dialogue-based follow up. It ensures onboarding is not just correct, but structured, proactive and future-ready by identifying gaps, suggesting recovery actions and continuously improving based on HR feedback.

Problem We Are Solving

- * Onboarding breaks down when documents are updated late (e.g. revised contract, delayed visa), requiring HR to restart manual checks.
- * Tools like SuccessFactors manage tasks but do not *interpret documents* or track readiness end-to-end.
- * Lack of proactive alerting causes onboarding failures (e.g. laptop not ready, manager unavailable on day one).
- * No visibility on onboarding progress and risk → HR cannot predict readiness.
- * HR workflows differ across countries, but document review logic does not adapt.

- * Teams lack centralised onboarding insights and task distribution (HR, IT, manager).
- * New hires often feel unprepared emotionally because onboarding is administrative, not holistic.

System We Are Building (Extended Scope)

We are developing an AI assistant that moves beyond document reading into full onboarding orchestration.

It includes everything from the MVP plus the following extended capabilities:

1. ****Document version tracking and update detection****

- * Detects when a contract or compliance document is updated and highlights what changed since the last version.

2. ****Multi-document merging into a unified onboarding case****

- * Extracts data from multiple files to generate a complete readiness snapshot.

3. ****Onboarding readiness scoring (0–100)****

- * Automatically measures how prepared the employee is for day one based on document completeness and uncompleted actions.

4. ****Automated task distribution****

- * Creates structured actions and assigns them to HR, IT and the manager (e.g. access setup, equipment ordering, welcome call).

5. ****Country or region-based compliance rules****

- * Flags actions based on the employee's work location (e.g. visa, local tax forms, cultural onboarding guidance).

6. ****Self-service conversational support****

- * Allows HR to ask follow up questions such as:
 - “What tasks are still pending?”
 - “What is at risk for this new hire?”

“What must be completed before day one?”

7. ****Notification triggers & escalations****

* Example: If start date is less than 7 days away and equipment is not confirmed → alert HR.

8. ****Export & audit history****

* Saves onboarding summaries with time stamps and links to source documents.

9. ****Feedback loop****

* HR can rate the assistant’s briefing and provide notes that can be used for future refinement.

10. ****Optional future add-ons****

- * 30/60/90 day role alignment plan
- * Integration with IT ticketing and HR systems
- * Predictive insight on first-year retention risk

Impact of the Extended System

- * Moves from “document review tool” to “active onboarding readiness engine”.
- * Enables structured and scalable onboarding across roles, teams and geographies.
- * Reduces errors, improves compliance confidence and accelerates employee integration.
- * Prevents breakdowns before they happen.
- * Elevates HR from reactive document processing to proactive workforce readiness.
